Confusion a case-marking particle by learner
— between existence place “ni” and range and attributive “de” —

OKADA, Miho · HAYASHIDA, Minoru

The Japanese language learners use “de” by mistake instead of a case-marking particle of existence place “ni”. This study investigates about acquisition of a case-marking particle of existence place “ni”. The test was executed. As a result, it was clarified that Japanese language learners were confused with a case-marking particle of existence place “ni” and a case-marking particle of range and attributive use “de”. The acquisition of the existence place “ni” showed the “U-shaped development”.

Keywords: error of case-marking particle, existence place “ni”, range and attributive “de”,
existence verb “iru (aru)”
